

For Fast Control of Morningglory, Palmer Amaranth, and Hemp Sesbania

LAYBY COTTON

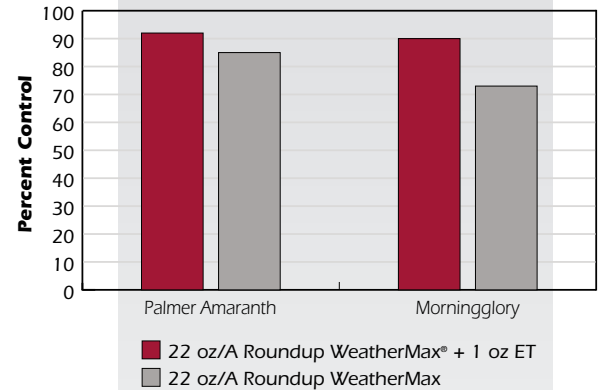

Key Benefits

- ET can be applied using a directed or hooded application at layby in cotton.
- ET works extremely fast controlling resistant and tough weeds in as little as three days.
- Works well under a variety of weather conditions.
- ET tank mixes well with all layby herbicides.
- Easy tank cleanout.

Application Window

ET must be applied when the cotton has reached an average height of 18 inches or more and has at least 3 inches of stem bark; using hooded or postdirected ground spray equipment only.

Improved Performance of Roundup with ET
