

CORN

For Fast Knockdown of Mites

Miteus[®] miticide/insecticide is very effective on a wide range of mites. The active ingredient in Miteus, *fenpyroximate*, causes rapid cessation of feeding and provides quick knockdown of mite populations.

Key Benefits

- Active on all motile stages of mites larvae, nymphs, and adults as well as topical activity on eggs
- Stops pest feeding within hours after application
- Nondisruptive to most beneficial insects
- Excellent rotational product for resistance management
- IRAC Group 21A new mode of action in mite control in corn

Key Pests Controlled

Mites, including Two-spotted spider mite and Banks grass mite.

Use Recommendations

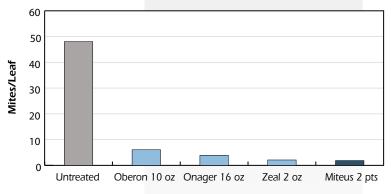

- 2.0 pints per acre
- Minimum gallons water (GPA)
 - Ground: 10 gpa
 - Air: 5 gpa

Use Information

- Miteus is a contact miticide. Thorough spray coverage is critical for maximizing mite control.
- Use of a spray adjuvant will provide improved coverage.
- Reentry interval: 12 hours
- Preharvest interval: 14 days for forage, silage, stover, and grain

Miteus Efficacy on Mites in Corn Post Treatment Average

Ayman Mostafa UACE, Maricopa, AZ 2013

Application: High Clearance Sprayer (Over the top 4-5 ft corn) Spray volume: 20 GPA NIS 0.25% v/v Application: June 18th
