

## FOR FAST CONTROL OF FIELD BINDWEED

Venue® Herbicide provides fast control of field bindweed in pasture, rangeland, and non-cropland. The active ingredient in Venue, pyraflufen-ethyl, is a PPO inhibitor which causes complete desiccation within 5 to 7 days after application.

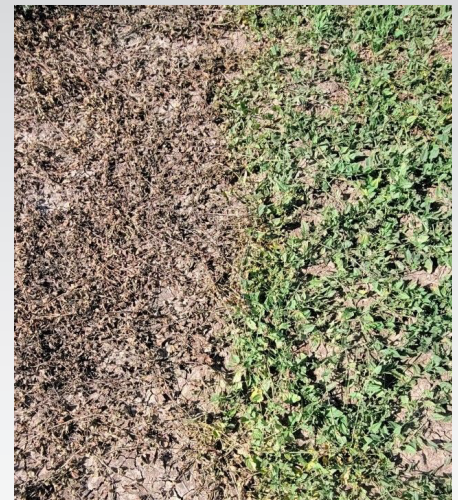

### Key Benefits

- Fast-acting for immediate visual results
- Economical - eligible for noxious weed cost-share programs
- Convenient - low use rate for ATV applications, mixing, and storage
- No grazing or haying restrictions
- Little to no impact on grasses
- Application flexibility: ground, air, backpack, and spot spray
- Can be applied in areas where other herbicides are not permitted
  - riparian zones
  - up to water's edge
  - up to the base of hardwood trees
  - and other sensitive areas

### Use Information

- Venue Rates
  - 3.5 fl oz/A on pasture and rangeland
  - 4.0 fl oz/A on roadsides, fence lines, ditchbanks, and other noncrop areas
- Use COC or MSO at 1% v/v.
- Applications can be made at any time field bindweed is present.
- Tank mix compatible with 2,4-D, dicamba, glyphosate, and other herbicides.
- Venue is a contact herbicide; apply in a minimum of 10 gallons of water per acre by ground.
