

Key Benefits

- Broadens the spectrum of weed control
- Increases control of hard-to-kill weeds
- Can be used in newly planted orchards and vineyards
- Can be used for sucker control in a variety of labeled crops
- Reduced risk of volatilization
- 0 day PHI for grapes, olive trees, pome fruits, pomegranates, stone fruits, and tree nuts
- “Caution” signal word makes Venue® easy to use and worker friendly

Mixing Instructions

- Fill spray tank with $\frac{3}{4}$ of the amount of water needed for the intended application; then turn on agitation.
- Follow proper mixing order sequence: water conditioners, wettable powders (WP), water dispersible granules (WDG), liquid flowables (LF), emulsifiable concentrates (EC), and adjuvants and/or oils.
- When tank mixing with glyphosate or paraquat herbicides, always add Venue to the tank prior to adding any glyphosate or paraquat products.
Do not add Venue to a tank already containing these products.
- Always refer to product labels for complete mixing order instructions.

Venue 3-4 fl oz + Glyphosate (5 lb ai) 2-3 pts														
Venue 3-4 fl oz + Glyphosate (5 lb ai) 2-3 pts + Oxyfluorfen 1-2 pts														
Venue 3-4 fl oz + Paraquat 3-4 pts														
Venue 3-4 fl oz + Glufosinate 48-82 fl oz														

- For best control, weeds must be at rosette stage or smaller than 4 inches in height.
- For control of large weeds, multiple applications may be needed.
- Increase Glufosinate rates as weeds become larger.
