

### NUT AND VINE CROPS

CRAZE<sup>®</sup> is a preemergence and postemergence herbicide that can be used to improve yellow and purple nutsedge spray programs. When used in combination with either glyphosate or glufosinate, CRAZE provides control of both yellow nutsedge and purple nutsedge compared to these products used alone.

#### Key Benefits

- Provides a different mode of action to manage both species of nutsedge
- Stops the growth and development of the plants and the reproductive structures below ground
- Provides systemic activity when used as a postemergence or preemergence application
- Excellent crop safety
- Not a restricted use pesticide

#### Use Information

- Use Rate: 8.6 oz per acre in combination with glyphosate or glufosinate
- Spray Volume: 30 gallons of water per acre
- Adjuvant: Crop Oil Concentrate or MSO at 1%
- Spray solution should be kept neutral to alkaline.
- Treat actively growing, non-stressed weeds.
- Do not apply with standing water or during irrigation.
- Follow label restrictions for use in almonds and stone fruit.

#### Product Information

- Use is limited to one application per year.
- Reentry Interval (REI): 12 hours
- Preharvest Interval (PHI): 90 days
